And ended with a Tweet heard round the world

# Week 1

**Dashboard Hits by Day - Week 1**

Date	Hits (Approximate)
1/22/20	50,000
1/23/20	100,000
1/24/20	250,000
1/25/20	500,000
1/26/20	600,000
1/27/20	950,000
1/28/20	980,000
1/29/20	1,000,000

The Dashboard was rapidly picked up by US and international press

# Early Data Operations

This block contains a collage of authoritative data sources. On the left, there are screenshots of the WHO website showing 'Novel Coronavirus 2019-nCoV situation reports' and the 'Chinese Center for Disease Control and Prevention' website. On the right, there is a screenshot of a Chinese government website with a table of confirmed cases. Below the collage is a Gmail icon, indicating that these sources were used for manual data curation.

## A Quick Detour:

# PAI Landscape Briefing Feb 3, 2020

# The PAI Landscape Feb 2020

## Open Source Surveillance

- **Survive**

- Help Lauren Garnder and Frank Dong survive the data surge:
  - Help ID trusted data sources
  - Help Triage recommendations and comments
  - Identify opportunities for process automation and prototype solutions
- Help improve information sharing with key partners
  - Backend augmented to support
- Other duties as assigned

- **Thrive**

- Help get surveillance picture closer to real-time while preserving quality
- Create a configurable infrastructure that allows us to rapidly stand-up capability in any crisis

*Survive  
and thrive*

## Disinformation Shapes the Battlespace

**Julia Carrie Wong** @juliacarriew · 7h

As coronavirus misinformation spreads, the press points the finger at social media and trolls. But professional media outlets have been a conduit of disinformation.

That racist "bat soup" canard? Thank British newspapers for spreading it around.

**CNN** @CNN · Jan 28

There's been a run of surgical masks in the US because of the coronavirus scare. You don't need them, physicians say. [cnn.it/2GzpKyM](http://cnn.it/2GzpKyM)

**Chris Cyrek** @SquarejawCity · Jan 27

#Wuhan BSL-4 Research Laboratory was using a bat-derived SARS-like #coronavirus to test its disinfectant procedures in 2018. Genetic sequencing of 2019 Novel CoV suggests the current virus is extremely similar. Proximity of the Research Lab to outbreak origin deeply troubling.

**CaliCali2000** @CaliCali2000 · Jan 30

🇺🇸🇺🇸🇺🇸🇺🇸🇺🇸  
" 300 US military personnel arrived in Wuhan for the Military World Games on October 19. The first coronavirus case appeared two weeks later, on November 2. Coronavirus incubation period is 14 days."

Just before my phone gets taken 1000mg vit C sodium ascorbate taken dissolved in 1/4 cup water every 3 hours. This will save your kids. They should be on their feet in 16 hours. Then start vitamin A for repair of damaged tissue.

Save our kids. Nobody should have died. This is the greatest crime against our people by our own people.

God Bless Samoa. Please stop this madness.

### Фейк: В Украине завели дело про Обамы

В том, что Национальное антикоррупционное бюро Украины начало расследование против Обамы, уверены российские СМИ. Соответствующая информация была опубликована 30 января российскими изданиями Lenta.ru, Украина.ru и др. Первоисточником фейковой информации выступил Кузьмин, бывший заместитель генпрокурора Украины.

## THE WEEK

# How we beat the Ebola epidemic

The Week Staff

### How was it contained?

By educating West Africans on how Ebola is transmitted, and by aggressive efforts to isolate and treat the infected. When the outbreak began 16 months ago, health care workers in Liberia, Guinea, and Sierra Leone were initially fighting blind. Doctors and nurses had to learn from scratch how to treat Ebola — the odds of survival dramatically increase with early, effective symptom management — and how to contain it. Helped by more than 10,000 volunteers from around the world, health workers gradually taught people to avoid unnecessary physical contact, to go to a clinic the moment they displayed symptoms, and to forgo the traditional ritual of washing corpses — a practice that accelerated the spread of the disease. "The best way to fight Ebola," says Joseph Boye Cooper, a volunteer worker in Liberia, "is to prevent it."

Expanded Data Sourcing

Automated Product Generation

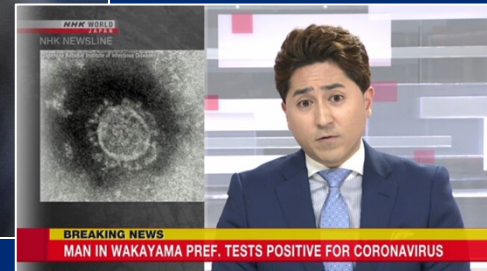

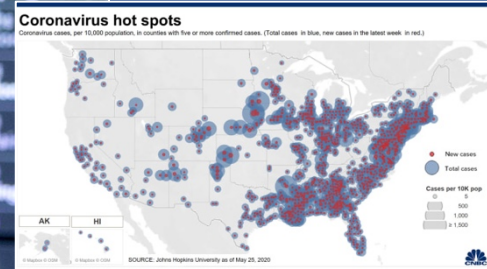

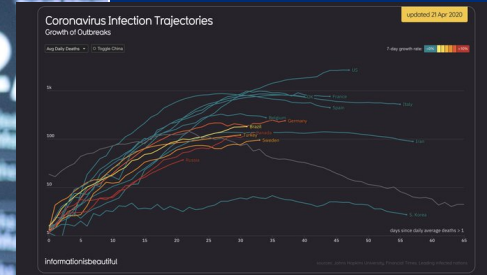

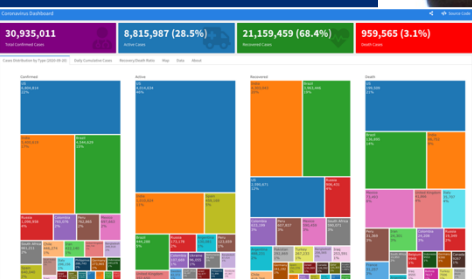

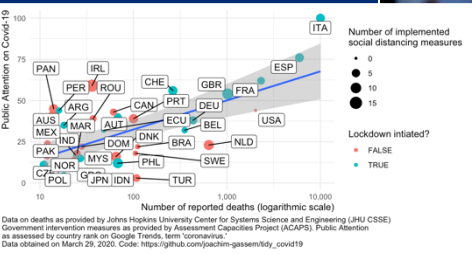

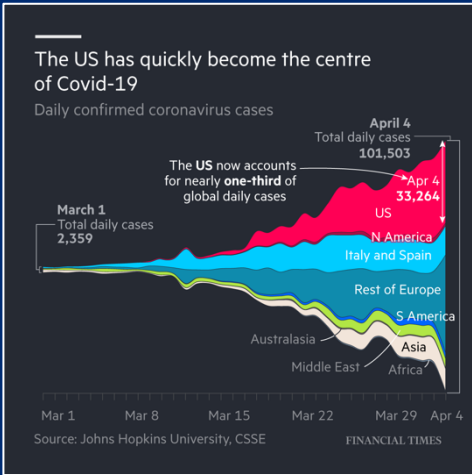

Open Data Sharing

Automated Updates

Automated Data Collection – Manual Error Recovery

# Expanding Use

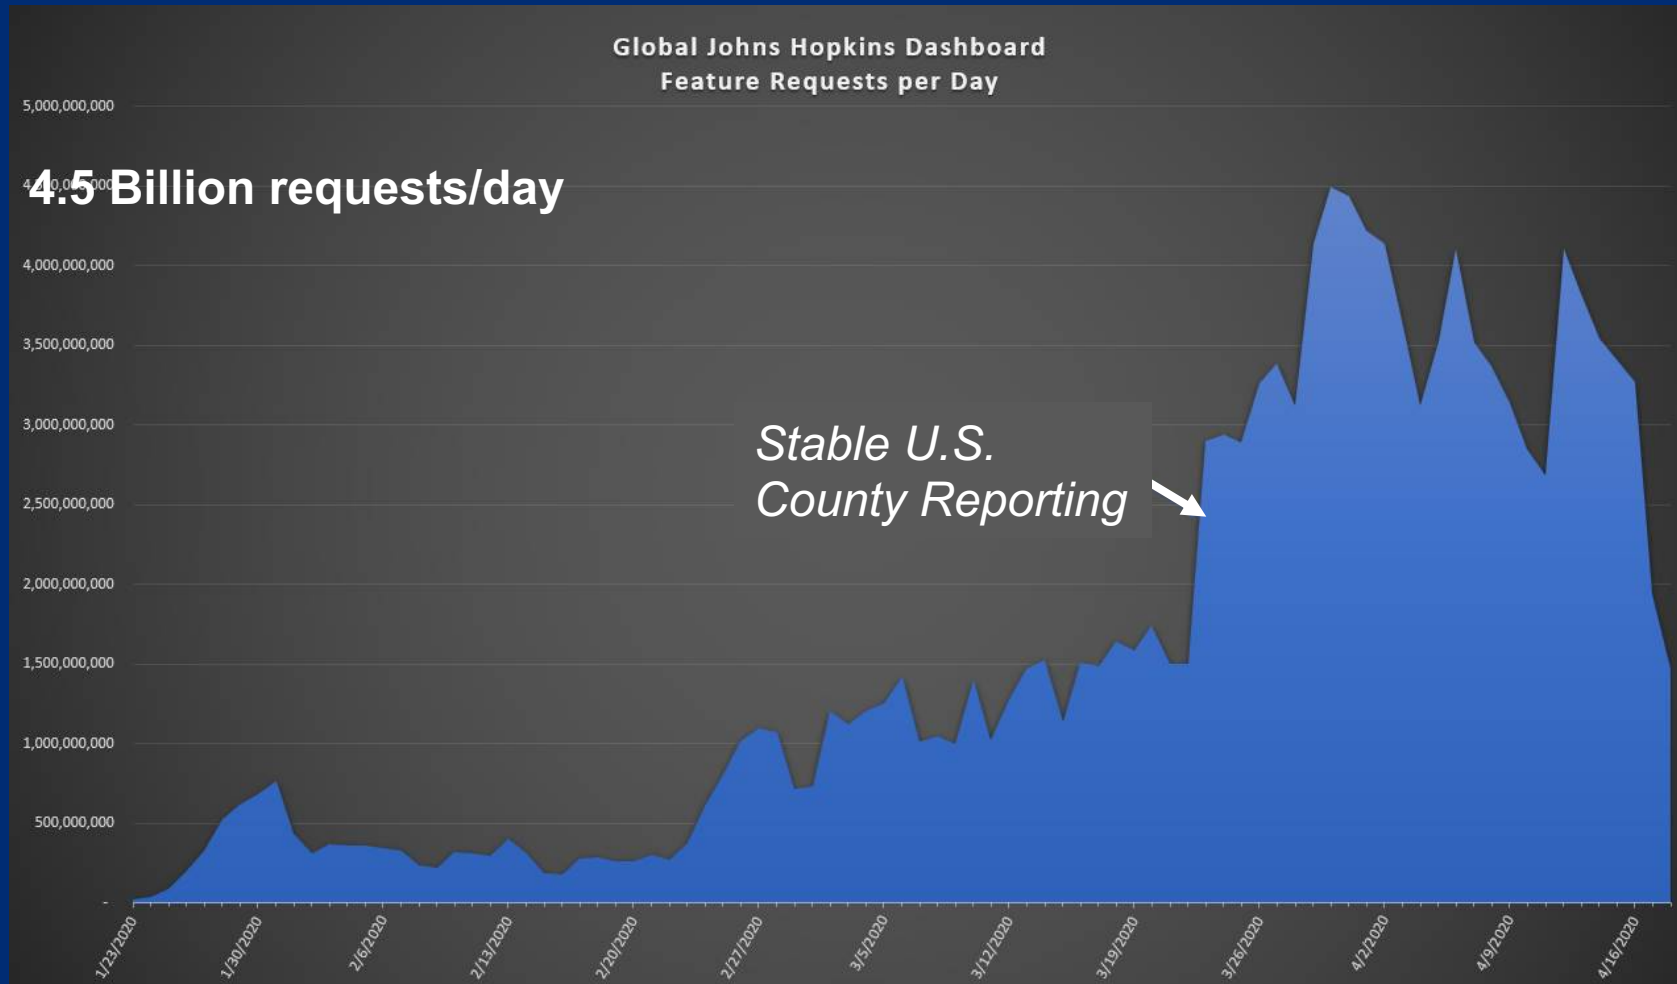

# And Massive Growth in Data Requests

# Why this is hard

(Hint: Standards Matter)

- Data reporting is inconsistent and constantly changing
- The scale of data is such that it requires methods for collection and collation that are both nuanced and complex
- Definitions and collection capabilities are inconsistent across counties, states, and countries

Simultaneously addressing both source instability globally and operating near a zero error rate requires extensive engineering and effort

Every morning, the first website I consult is the [Johns Hopkins University \(JHU\) COVID-19 dashboard](#). It is the go-to resource to track the global pandemic. Public-health authorities use it to guide policies, with the dashboard featured prominently in emergency operation centers around the world. Researchers depend on it for their analysis and modeling. Virtually every news organization uses the JHU data as the [basis for their reporting](#).

TIME

Google Maps @googlemaps · Sep 23  
 To help you navigate the world safely, you'll start seeing information about new COVID cases in an area with data from sources like @nytimes, @JohnsHopkins, & @Wikipedia in a new layer on Maps.  
 Rolling out on iOS & Android, with more ways to stay up-to-date coming soon. 🙌

# What's Next

## A need for open public data standards and sharing in light of COVID-19

The disjointed public health response to the COVID-19 pandemic has demonstrated one clear truth: the value of timely, publicly available

timely open public data standards and sharing in light of spatial and temporal data standards and sharing in light of it is imperative to have a standardized reporting system for collecting high-quality data on emerging infectious diseases in real-time. The data should be made available at a spatial and temporal scale that is granular enough to prove useful for planning and modelling purposes. Additionally, a critical component of the proposed system is the democratization of data; all collected information (observing necessary privacy standards) should be made publicly available immediately upon release, in machine-readable formats, and based on open data standards.

“Moving forward, it is imperative that a **standardized reporting system** for systematically collecting, visualizing, and sharing high-quality data **on emerging infectious and notifiable diseases in real-time** is established. The data should be made available **at a spatial and temporal scale that is granular enough to prove useful** for planning and modelling purposes. Additionally, a critical component of the proposed system is the **democratization of data**; all collected information (observing necessary privacy standards) should be **made publicly available immediately upon release, in machine-readable formats, and based on open data standards.**”

A need for open public data standards and sharing in light of COVID-19
